S Achyuta Tamraparni

Email: achyutatamweb@gmail.com | LinkedIn: linkedin.com/in/s-achyuta-tamraparni | GitHub: github.com/ollivanter
Bangalore, India

Professional Summary

Motivated Computer Science Engineering undergraduate at PES University with a strong foundation in full-stack web development, database management, and scripting. Demonstrated academic excellence with Distinction in both Grade 10 and Grade 12, and a JEE Mains score above the 95th percentile. Proficient in designing and deploying interactive tools using modern web and backend technologies.

Education

B.Tech, Computer Science Engineering | PES University | Present

Grade 12 - Science (PCM) | Distinction | Narayana PU College | 2026

Grade 10 | Distinction | Capitol Public School | 2024

Projects

DevWrapped - GitHub Analytics Dashboard | github.com/ollivanter/DevWrapped
Technologies: Python, Streamlit, aiohttp, pandas, Plotly, ReportLab, GitHub REST API

- Developed a Spotify-Wrapped-style web app that turns any public GitHub username into a visual report: language breakdown, 7x24 commit heatmap, top repositories, contribution growth, and auto-generated insights.
- Built an asynchronous data pipeline over the GitHub REST API with rate-limit tracking, separating fetching, analytics, and presentation layers for maintainability.
- Added one-click PDF report export using ReportLab and Kaleido for static chart rendering.

Life Automations - Student Routine Automation Suite | github.com/ollivanter/life-automations
Technologies: Python, JavaScript, Google Apps Script, Telegram Bot API, Notion API, Power Automate, GitHub Actions

- Built three automations that run on free infrastructure at zero cost: a Telegram bot for daily German vocabulary and quizzes, a Notion study tracker that writes weekly and monthly progress reports, and a deadline catcher that adds college deadlines to Google Calendar.
- Scheduled jobs with GitHub Actions cron and designed them to be stateless and idempotent, so re-runs or delayed triggers never create duplicate pages, reviews, or events.
- Worked around blocked Outlook auto-forwarding with a Power Automate to Gmail to Apps Script pipeline; covered all three tools with 58 offline tests using fake API clients.

InvoiceFlow - Invoice Generator and Tracker | github.com/ollivanter/InvoiceFlow
Technologies: JavaScript, Node.js, HTML5, CSS3

- Built a full-stack invoicing web app for generating and tracking invoices, with a Node.js backend and responsive light/dark interface.
- Implemented OTP-based email verification, company branding with logo upload, and a master item catalog with fuzzy-search autocomplete.

AskPES - Anonymous Q&A Platform for PES University | github.com/ollivanter/AskPES | ask-pes.vercel.app
Technologies: Next.js (App Router), TypeScript, PostgreSQL (Neon), Drizzle ORM, Elasticsearch, Tailwind CSS, Vercel

- Built and deployed a full-stack Q&A platform with department-wise feeds, tagging (up to 5 tags per question), one-vote-per-user voting, and asker-accepted answers.
- Implemented hybrid search combining BM25 keyword and semantic search, merged with Reciprocal Rank Fusion and re-ranked by a cross-encoder; added a PostgreSQL full-text fallback.
- Designed an anonymity model using deterministic pseudonyms hashed from post IDs, with sign-up restricted to university email domains and emails never displayed publicly.

Technical Proficiencies

- **Frontend:** HTML5, CSS3, JavaScript, TypeScript, Next.js, Tailwind CSS, Bootstrap
- **Backend & Scripting:** Python, Node.js, REST APIs, Streamlit, pandas, Google Apps Script
- **Databases & Search:** PostgreSQL, MongoDB, Elasticsearch
- **Version Control & Tools:** Git, GitHub, GitHub Actions, Power Automate

Awards & Certifications

- Scored **95th percentile+** in JEE Mains 2026 - National-level engineering entrance examination conducted by NTA.
- **Distinction** in Grade 12 Board Examinations (2026) - Narayana PU College.
- **Distinction** in Grade 10 Board Examinations (2024) - Capitol Public School.
